ONEWAY Manufacturing Announces Revolutionary New Concept in Woodturning: The Sit Down Lathe.

Stratford, Ontario, Canada, July 2, 2007 -

ONEWAY Manufacturing can put another 'first' into their already long list of accomplishments with the introduction of their new concept woodturning lathe. ONEWAY has successfully designed a lathe that can be used while the turner is either standing up in the traditional position, or sitting down in a comfortable chair or wheelchair. Production is slated for this summer, with lathes being available for shipment in September of 2007.

This lathe, like almost 100% of ONEWAY products is designed and manufactured in Stratford, Ontario, Canada. Its design was born from the requests of customers who can't turn for as long as they might like due to fatigue in their legs, bad knees, or an aching back. Electronic speed control, a full one horsepower motor, patented clamping and rotation should is sure to make this machine a great addition for all turners.

“This lathe is like nothing available on the market today. Not only will it open up the possibility of turning to wheelchair bound people, but it will also make it possible for people to enjoy their hobby from a comfortable position, for a longer period of time. We are very proud of the capabilities of this machine”, Tim Clay, president of ONEWAY Manufacturing said during an interview.

ONEWAY Manufacturing is a family owned and operated company who has been supplying products of the highest quality to Woodturners worldwide since 1991. For further information on this totally new concept, patent pending lathe, contact Cindy Clay at 1-800-565-7288.
